

Business Insights Report

Sales Data Analysis Project
Prepared using Excel, SQL & Power BI Dashboard

1. Region Generating the Highest Sales

Based on the sales analysis and dashboard visualizations, the **West Region** generated the highest sales among all regions. The region consistently showed strong performance across multiple product categories and contributed significantly to overall revenue.

Key Observations:

- West region had the highest customer demand.
- Sales performance remained stable across multiple months.
- High-performing customers were concentrated in this region.

Business Impact:

The West region is currently the strongest revenue-driving area for the business and should continue receiving strategic focus and inventory support.

2. Most Profitable Product Category

After analyzing profit by product category, **Electronics** emerged as the most profitable category.

Key Observations:

- Electronics generated high sales volume along with strong profit margins.
- Customers showed repeated purchasing behavior in this category.
- Profit contribution from Electronics exceeded other categories consistently.

Business Impact:

The company should prioritize Electronics products through targeted marketing campaigns, premium offerings, and inventory expansion.

3. Are Discounts Affecting Profit?

The analysis of discount versus average profit revealed that **higher discounts negatively affected profitability**.

Key Observations:

- Orders with larger discounts showed lower average profits.
- Excessive discounting significantly reduced earnings.
- Moderate discounts performed better compared to aggressive discount strategies.

Recommendation:

Management should avoid unnecessary high discounts and focus on strategic promotional pricing.

4. Best Performing Month

The monthly sales trend analysis showed that **December** was the best-performing month.

Key Observations:

- Sales increased significantly during the end-of-year season.
- Customer purchasing activity was highest during festive periods.
- Multiple categories experienced higher order volumes.

Recommendation:

The company should strengthen inventory planning and launch marketing campaigns before peak seasons.

5. Key Recommendations for Management

- Focus marketing and operational investments in high-performing regions.
 - Expand profitable product categories like Electronics.
 - Optimize discount strategies to protect profit margins.
 - Prepare inventory and logistics before seasonal demand peaks.
 - Improve customer retention using loyalty programs and personalized offers.
-

Conclusion

This project successfully demonstrated the complete data analytics workflow including data cleaning using Excel, exploratory data analysis using Pivot Tables, SQL data extraction, and Power BI dashboard creation. The insights generated from the analysis support business decision-making and highlight opportunities for future growth.
